

D-DAY MUSEUM

DEKORGRIP RESIN BOUND PORTSMOUTH

RESIN BOUND AT D-DAY MESEUM

SITUATION:

The iconic D-Day museum situated along the Southsea front in Portsmouth UK, originally opened in 1984 and was operation till March 2017. The building was in need of an overhaul and update throughout as well as the surrounding landscape and surfacing. The work at the museum was planned to be carried out ahead of the 75th anniversary of D-Day (6th June 2018).

The project in hand was not only big but also complicated, due to the museum being in a historical and protected setting. Numerous challenges had to be planned for and overcome during the course of the project.

SOLUTION:

After agreeing with the client, a combination of Natural Wicker and Sandringham aggregate blends were selected to be laid at a depth of 20mm, which would sustain the demand of footfall. The choice of blends allowed the contractor to provide distinctive areas around the Museum, highlighting walkways and other features.

Location:	Portsmouth UK
Project Cost:	Approx. 4.8 Million
System Used:	DekorGrip Resin Bound
Sector:	Heritage Regeneration
Completion Date:	May 2018
